

The Campagnola Cobra has been designed and manufactured for utmost versatility in vineyard & stone fruit pruning applications. Campagnola has invested heavily in thorough research and development, to make a dependable pruning solution available for horticulturists the world over.

You can rest assured that with the Cobra you are getting a fast, reliable, versatile, comfortable, easy to use and above all safe pruning solution.

Powered by a new lightweight and super slim, Lithium Ion battery pack and fitted with a secure, adjustable harness; the Cobra PRO is designed to fit most body types comfortably. The Cobra PRO features multiple cutting modes, which are easily selectable via the belt mounted control box:

- **AUTO100** – The mobile cutting blade opens to its maximum cutting capacity; cutting branches up to 35mm with great speed.
- **AUTO70** – Reduces the cutting capacity to 24.5mm or 70% of the maximum blade opening.
- **AUTO40** – The cutting blade closes even further granting a maximum cutting capacity of 14mm or 40% of the maximum blade opening. This is the fastest cutting mode and is perfect for spur pruning.
- **MANUAL** – The progressive cutting mode synchronises the cutting blade movement with pressure exerted on the operating lever. This mode is recommended until the operator is accustomed to using the Cobra or for very precise cutting applications.

The Campagnola focus on safety ensures all cutting modes allow the operator to cancel the mobile blade cutting action at any time by releasing the operating lever. The Cobra EVO is also fitted with various safety and fastening devices safeguarding the operator against accidental breakage or personal injury.

Smooth rubber grips, an ergonomic operating trigger, balanced weight distribution and an angled cutting head make the Cobra feel as if it is an extension of the arm; twisting, turning and moving the wrist is less tiring and more comfortable as a result.

The Cobra EVO has a battery endurance of 10 hours, which is displayed via LED light on the battery pack.

### **Technical Information**

---

- Hand piece weight – 918g
- Battery weight – 1.7kg
- Maximum cutting capacity for Cobra EVO V – 35mm
- Maximum cutting capacity for Cobra EVO F – 40mm
- Battery voltage - 51 V
- Battery endurance – 10 hours
- Battery type - Lithium ion

#### **Included with the Cobra:**

- Cobra electronic shear
- Cobra control box
- Cobra Lithium ion battery and harness
- Cobra holster
- Cobra arm band (for cable fastening)
- Cobra battery charger
- Cobra blade (spare)
- Campagnola sharpening stone
- Spray grease
- Cobra instruction manual
- Cobra warranty forms
